

Practice Program

You are required to create a Django project named eventmanagement that includes two apps: events (for handling the events and their display) and categories (for listing the event categories). The project should meet the following specifications:

1. Home Page:

- o The home page of the website should have 2 links named Upcoming Events and Event Categories.

2. Upcoming Events Page (events app):

- o When you click on the Upcoming Events link, it should redirect you to a page where a table of upcoming events is displayed.
- o The table should include the following columns: Event Name, Event Date, Location, and Category (e.g., Conference, Workshop, etc.).
- o The data for this table should be extracted from the database stored in the Django admin interface with name Events and should be ordered by date in ascending order. (Enter the data in the database as shown in sample output)
- o There should be a search bar that allows the user to search for events by event name.
- o There will also be a link at the bottom of the page labelled Event Categories that will redirect the user to the Event Categories page of categories app.

Upcoming Events

127.0.0.1:8000/events/

Upcoming Events

Search by event name

Search

Event Name	Event Date	Location	Category
DjangoCon 2024	Sept. 15, 2024	Ahmedabad	Conference
Tech Meetup	Sept. 20, 2024	Rajkot	Meetup
Data Science Meetup	Sept. 21, 2024	Surat	Meetup
Startup Pitch Seminar	Sept. 23, 2024	Vadodara	Seminar
Innovation Expo	Sept. 26, 2024	Ahmedabad	Exhibition
Security Hackathon	Sept. 30, 2024	Surat	Hackathon
Machine Learning 101	Oct. 1, 2024	Vadodara	Webinar
Python Workshop	Oct. 5, 2024	Ahmedabad	Workshop
AI Hackathon	Oct. 10, 2024	Ahmedabad	Hackathon
Cloud Computing Webinar	Oct. 22, 2024	Ahmedabad	Webinar

Upcoming Events

Meet

Search

Event Name	Event Date	Location	Category
Tech Meetup	Sept. 20, 2024	Rajkot	Meetup
Data Science Meetup	Sept. 21, 2024	Surat	Meetup

[View Event Categories](#)

HTML Snippet For above webpage (Add appropriate DTL in it):

```
<html>
<head> <title>Upcoming Events</title> </head>
<body>
<h1>Upcoming Events</h1>
<form method="GET">
<input type="text" name="q" placeholder="Search by event name">
<button type="submit">Search</button>
</form>
<table border="1">
<thead>
<tr>
<th>Event Name</th> <th>Event Date</th> <th>Location</th> <th>Category</th>
</tr>
</thead>
<tbody>
<tr>
<td></td> <td></td> <td></td> <td></td>
</tr>
</tbody>
</table> <br>
<a href="#">View Event Categories</a> </body>
</html>
```

3. Event Categories Page (categories app):

o When you click on the Event Categories link, it should redirect you to a page where a list of event categories is displayed.

o The categories should be extracted from the database stored in the Django admin interface with name Categories and displayed in order.

o There will also be a link at the bottom of the page labelled Upcoming Events that will redirect the user to the Upcoming Events page of events app.

HTML Snippet For above webpage (Add appropriate DTL in it):

```
<html>
<head>
<title>Event Categories</title>
</head>
<body>
<h1>Event Categories</h1>
<ul>
<li></li>
</ul>
<br/>
<a href="#">View Upcoming Events</a>
</body>
</html>
```

4. Admin Functionality:

- Create a superuser with your roll number as the username and your enrollment number as the password.

This superuser should be able to add and manage events and categories within the Django admin interface.

- Ensure that all data for both pages is extracted dynamically from the database and not hardcoded in HTML.

Create a Python Django Project with named musicplayer(write a terminal command) and follow the following steps:

1. Create an app called findmusic. (write a terminal command)
2. Create a model named Music with attributes song,artist,year and album where song,artist and album are text fields and year is a numeric field.
3. Write terminal commands to Migrate all the sqlite tables.
4. Write a terminal command to Create a superuser.
5. Write appropriate views.py code to extract the data from the created model named Music to display in html file called musicfind.html. (No need to write code for html file)

Use following code to import appropriate django modules/classes

models.py

```
from django.db import models
```

views.py

```
from django.shortcuts import render
```

```
from .models import Music
```
